READ THIS NOTICE: Submitting any film, print, digital media, or images in any form to this firm for processing, printing, or other handling constitutes an AGREEMENT by you that any damage or loss by our company, subsidiary, or agents, even though by our negligence or other fault, will only entitle you to replacement with a like amount of imaging media or unexposed film and processing, if available. The acceptance by you of the film, print, digital media, or images is without other warranty or liability, and recovery for any incidental or consequential damages is excluded. 90-day unclaimed orders will be considered abandoned.

Definitions of Photographic Terms:

A Transparency: The opposite of a negative. A positive image on a transparent film base. "Chrome" is part of the film's name (e.g. Ektachrome; Fujichrome; Agfachrome).

A Slide: A transparency mounted in a plastic or cardboard slide mount. Typically, a slide refers to a 35mm transparency mounted in a 2x2 inch slide mount, thus making it easy to handle or insert into a carousel tray for projection viewing.

Reversal Film: Film designed to be developed as slides or transparencies. The latent negative image is "reversed" during processing to produce a positive image.

A Scan: A digital image produced from a transparency, slide, negative or print.
